

Take-Home Test: DANA Bisnis Merchant Referral Program

****This take-home test uses DANA's real product context, but candidates are expected to make reasonable assumptions where information is not publicly available. You may use publicly available information, your own product judgment, and observations from the DANA app****

About DANA

DANA is one of Indonesia's leading digital wallet platforms, serving millions of users across the country. DANA enables users to make payments, transfer money, pay bills, purchase digital products, and access various financial and lifestyle services through a simple mobile experience.

Beyond serving individual users, DANA also supports micro and small businesses through **DANA Bisnis**, a merchant-facing solution that helps them accept digital payments and manage their business more effectively.

Background

This year, DANA is heavily focused on scaling its micro and small merchant business. The company has an ambitious target to grow the number of active micro merchants registered with DANA Bisnis within a short timeline. These merchants may include:

- food and beverage sellers,
- small grocery shops,
- home-based businesses,
- local fashion or beauty sellers,
- service providers,
- offline UMKM merchants,
- and other small businesses that can benefit from accepting digital payments.

Today, merchant acquisition can happen through several channels, such as sales outreach, organic registration, marketing campaigns, partnerships, and community-based initiatives.

To accelerate growth, DANA is exploring a new acquisition channel: a **merchant referral program**.

The idea is simple:

DANA Indonesia

- existing DANA users can refer UMKM merchants they know to register for DANA Bisnis, and/or
- existing DANA Bisnis merchants can invite other UMKM merchants to join DANA Bisnis.

The referral program will be launched as a **DANA Mini Program**.

Candidates can explore the DANA Mini Program experience directly from the DANA app by opening the DANA Home page and tapping “**View All**” to see available Mini Programs.

The Challenge

Design a Referral Program that helps DANA acquire more quality micro and small merchants through referrals.

The goal is not only to collect many referred merchant leads. The goal is to acquire quality micro merchants who:

- successfully register for DANA Bisnis,
- complete required onboarding steps,
- start accepting payments,
- and show signs of real business activity.

Your solution should address the end-to-end referral experience, including:

- How users discover and understand the program
- How referrals are submitted or shared
- How referral progress and status are communicated
- How rewards are earned and managed
- How referred merchants are guided through onboarding and activation

Scope & Constraints

Please use the following assumptions:

1. Target Users

The referral program may be used by:

DANA users

- everyday DANA wallet users,
- people who know UMKM owners in their neighbourhood, family, or community,
- users who may not be highly familiar with merchant onboarding or business registration.

Existing DANA Bisnis merchants

- micro and small merchants already using DANA Bisnis,
- merchants who may know other business owners,
- sellers who may be motivated by business-related incentives or peer recommendations.

Referred merchants

- UMKM owners who may or may not already use DANA,
- merchants with varying levels of digital literacy,
- merchants who may be unfamiliar with DANA Bisnis,
- merchants who may need clear explanation, trust signals, and simple onboarding steps.

2. Merchant Onboarding

Becoming a DANA Bisnis merchant and obtaining a QRIS requires a simple registration process.

The registration process includes:

- Business Name
- Business Industry
- Business Location

3. Product Platform

The referral program will be launched as a **DANA Mini Program**.

Candidates can explore the DANA Mini Program experience directly from the DANA app by opening the DANA Home page and tapping “**View All**” to see available Mini Programs.

Candidates may propose additional entry points if they believe it would improve program adoption.

4. Incentives

DANA is open to giving rewards to users or merchants who successfully refer new DANA Bisnis merchants.

However:

- reward cost must be reasonable,
- incentives should encourage quality merchant acquisition,
- the program should avoid spammy or low-quality referrals,
- rewards should ideally be tied to meaningful merchant activation, not only referral submission.

Assessment Focus

The assessment of the take home test would emphasis on:

- Understanding users, problems, and business goals
- The quality of the design
- The rationale behind the user experience

Deliverables

You will be given 7 days to work on the solution. Please prepare a slide deck in **PDF format** that covers the following:

1. User Understanding and Problem Framing

Explain how you understand the problem.

You may cover:

- who the main users are,
- what motivates each user group,
- what barriers may prevent them from participating,
- what makes micro merchant acquisition difficult,
- and what “quality merchant acquisition” should mean

2. Solution Concept

Present your proposed solution, including:

- Referral program concept
- Incentive strategy and reward scheme
- Key product decisions
- UX approach or methodology used to shape the solution

3. High-fidelity UI & Prototype

Design the end-to-end experience for the Merchant Referral Program, including:

3.1 Program Discovery & Understanding

Design the experience that introduces the referral program to potential users. Consider how users learn about the program, understand its purpose, and decide whether to participate.

Please include elements such as the Mini Program icon, Mini Program name, entry point, landing page, onboarding, educational content, or other experiences you believe are important.

3.2 Referral Experience

Design the experience that enables users to refer merchants and monitor referral progress.

Consider what information users need, how referrals should be submitted or shared, and how the experience can remain simple and trustworthy.

3.3 Reward Experience

Design the experience that communicates referral outcomes and rewards.

Consider how users understand their progress, eligibility, reward status throughout the journey, and how to make the experience feel transparent and fair.

3.4 Referred Merchant Experience

Design the experience for merchants from receiving a referral through becoming an active DANA Bisnis merchant.

Consider what support, information, or guidance may be needed to help merchants:

- Understand the value of DANA Bisnis
- Complete registration and obtain a QRIS
- Successfully start accepting payments
- Become an active DANA Bisnis merchant

3.5 Design Rationale

For key screens and flows, explain the reasoning behind your decisions.

Examples include:

- Visual design decisions (e.g. colors, typography, icons, illustrations)
- Why a particular flow or interaction was chosen
- How the design addresses user needs and business goals
- How information hierarchy was structured
- Design principles applied

The goal is not only to demonstrate what you designed, but also why you designed it that way.

Please include the prototype link in your submission.

4. Success Metrics & Validation Plan

Explain how DANA should validate whether the program works.

Please include:

- what success metrics should be tracked,
- what risks should be monitored,
- how you would test the first version,
- and what decision criteria DANA should use to continue, iterate, or stop the program.

Submission Guidelines

- Submit your work as a PDF file (Google Drive links will not be accepted)
- Prepare and present your submission in **English**
- Include a prototype link (Figma or equivalent) within the PDF
- Ensure reviewers can access the prototype without requesting permission
